Grab a nameplate and write your preferred name large enough to be read by me from the front of the class

Course Overview

Tim Jackman

BU Summer Challenge

July 7th, 2025

About Me

- Sixth Year PhD Student at Boston University
  - Study Complexity Theory, Circuit Complexity
- Bachelor of Science in Mathematics from Northeastern University
- TAed for a dozen of BU CS courses

Tim Jackman

About Me

- Sixth Year PhD Student at Boston University
  - Study Complexity Theory, Circuit Complexity
- Bachelor of Science in Mathematics from Northeastern University
- TAed for a dozen of BU CS courses
- I have a cat

Tim Jackman

Clover

Syllabus

- Syllabus has everything you need to know

Syllabus

- Syllabus has everything you need to know
  - You can find it on our course website:
    https://cs-people.bu.edu/tjackman/busc2025

Syllabus

- Syllabus has everything you need to know
    - You can find it on our course website:
      https://cs-people.bu.edu/tjackman/busc2025
    - Slides, demos, worksheets, etc. will also be posted there

Syllabus

- Syllabus has everything you need to know
  - You can find it on our course website:
    https://cs-people.bu.edu/tjackman/busc2025
  - Slides, demos, worksheets, etc. will also be posted there

- This seminar is a two week introduction to programming and computer science concepts

Syllabus

- Syllabus has everything you need to know
  - You can find it on our course website:
    https://cs-people.bu.edu/tjackman/busc2025
  - Slides, demos, worksheets, etc. will also be posted there

- This seminar is a two week introduction to programming and computer science concepts
  - No prior programming experience is required/assumed.

Absences

Attendance is **mandatory**. Missing students will be reported to the Summer Term office.

- If you are too sick to attend you <u>must</u> reach out to the Summer Term office. Emailing me is not sufficient.

Course Overview

- Every class will be broken into two blocks with a short break.

Course Overview

- Every class will be broken into two blocks with a short break.

- First few classes will focus on programming basics

Course Overview

- Every class will be broken into two blocks with a short break.

- First few classes will focus on programming basics
  - Variables, Conditionals, Functions, Loops, Lists, IO, etc.

Course Overview

- Every class will be broken into two blocks with a short break.

- First few classes will focus on programming basics
  - Variables, Conditionals, Functions, Loops, Lists, IO, etc.
  - Today is in Scratch & MakeCode, all future classes will be Java

- First few classes will focus on programming basics
  - Variables, Conditionals, Functions, Loops, Lists, IO, etc.
  - Today is in Scratch & MakeCode, all future classes will be Java

- Blocks will be a mix of lectures, demos, and hands-on activities

- 6 CS Topic Lectures on Networking, Software Development, Algorithms, Complexity Theory, Cryptography, and Machine Learning

Projects

This seminar will culminate in group projects

Projects

This seminar will culminate in group projects

- Groups of 3-4, will be formed at the end of this week

Projects

This seminar will culminate in group projects

- Groups of 3-4, will be formed at the end of this week

- You will choose to code in Scrath, MakeCode, or Java

Projects

This seminar will culminate in group projects

- Groups of 3-4, will be formed at the end of this week

- You will choose to code in Scrath, MakeCode, or Java

- The second blocks of next week will be for working on your projects

Projects

This seminar will culminate in group projects

- Groups of 3-4, will be formed at the end of this week

- You will choose to code in Scrath, MakeCode, or Java

- The second blocks of next week will be for working on your projects

- The final day will be dedicated to presenting your projects

Assignments

- At the every class you'll be given a worksheet to do for "homework"

Assignments

- At the every class you'll be given a worksheet to do for "homework"

- Build on what we learned or introduce the next day's topic

Assignments

- At the every class you'll be given a worksheet to do for "homework"

- Build on what we learned or introduce the next day's topic

- Answers will be distributed at the beginning of next class

Assignments

- At the every class you'll be given a worksheet to do for "homework"

- Build on what we learned or introduce the next day's topic

- Answers will be distributed at the beginning of next class

- *Optional*, but I highly suggest you do them

Grading

- There are no grades during BU Summer Challenge

Grading

- There are no grades during BU Summer Challenge

- You will receive a letter of evaluation written by me

Grading

- There are no grades during BU Summer Challenge

- You will receive a letter of evaluation written by me
  - This letter will reflect your performance in class

Grading

- There are no grades during BU Summer Challenge

- You will receive a letter of evaluation written by me
  - This letter will reflect your performance in class
  - Not just individually, but as a member of our classroom community

Grading

- There are no grades during BU Summer Challenge

- You will receive a letter of evaluation written by me
  - This letter will reflect your performance in class
  - Not just individually, but as a member of our classroom community
  - Participating, doing the assignments, working well with others, etc. will help me write you a positive letter

Collaboration

- I will often ask you to collaborate in pairs or small groups.

Collaboration

- I will often ask you to collaborate in pairs or small groups.

- During activities, you should always feel free to ask questions to the people around you.

Collaboration

- I will often ask you to collaborate in pairs or small groups.

- During activities, you should always feel free to ask questions to the people around you.

- Please do not use chatGPT or any other LLM to help you complete any of our activites in this course

Collaboration

- I will often ask you to collaborate in pairs or small groups.

- During activities, you should always feel free to ask questions to the people around you.

- Please do not use chatGPT or any other LLM to help you complete any of our activites in this course
  - The point of this is for <u>you</u> to learn the basics of programming!

Collaboration

- I will often ask you to collaborate in pairs or small groups.

- During activities, you should always feel free to ask questions to the people around you.

- Please do not use chatGPT or any other LLM to help you complete any of our activites in this course
    - The point of this is for <u>you</u> to learn the basics of programming!
    - As we'll see, the LLMs only truly work if you know what you're doing

Collaboration

- I will often ask you to collaborate in pairs or small groups.

- During activities, you should always feel free to ask questions to the people around you.

- Please do not use chatGPT or any other LLM to help you complete any of our activites in this course
  - The point of this is for <u>you</u> to learn the basics of programming!
  - As we'll see, the LLMs only truly work if you know what you're doing

- During project work, you can use the internet for help, but I prefer you use StackOverflow rather than the LLMs
